**Disaster recovery** is the process, policies and procedures related to preparing for recovery or continuation of technology infrastructure critical to an organization after a natural or human-induced disaster.

We have all heard of the term and most agree that it is definitely a plan that needs to be implemented in their organization but most business do not have the time, expertise or resources to actually put the plan in motion.

With the increasing importance of information technology for the continuation of business critical functions, combined with a transition to an around-the-clock economy, the importance of protecting an organization's data and IT infrastructure in the event of a disruptive situation has become an increasing and more visible business priority in recent years.

It is estimated that most large companies spend between 2% and 4% of their IT budget on disaster recovery planning, with the aim of avoiding larger losses in the event that the business cannot continue to function due to loss of IT infrastructure and data. Of companies that had a major loss of business data, 43% never reopen, 51% close within two years, and only 6% will survive long-term.

Where does your company fit? We can help.

Our Professional IT Staff will come in, evaluate your IT infrastructure and provide you with a solid Disaster Recovery Plan that will not only meet your needs, but also your budget.

Already have a plan but not sure how to implement it? Let our IT staff put the wheels in motion before something tragic happens to your business.

From simple Network Access Storage devices to Off-site Data Backups, our knowledgeable staff of consultants and technicians can ensure that your business is up and running as quickly as possible.

Off-site plans start at only \$15.00 per month for up to 15 Gig! Add additional blocks of 5 Gig for only \$5.00!
